

ó

K Ó C B E K
since 1929

There are 825 varieties of pumpkins in the world but only one variety is suitable for the production of pumpkin seed oil.

Cucurbita pepo var. styriaca.

The pumpkins that we use for the production of our pumpkin seed oil
ripen in unspoilt nature.

Pumpkin seed oil, also known as the fountain of youth, contains vitamins, trace elements, carotenoids, rare amino acids and a multitude of others important substances.

HOT - PRESSED PUMPKIN SEED OIL

Traditional production process. The hot press process gives the oil a characteristic dark colour and viscosity. It also gives a rich aroma and an intense flavour.

The methods we use to make our hot pressed pumpkin seed oil today are the same as they were in 1929. The process of producing the oil with minimal intervention preserves the richness of natural pumpkin seeds.

In hot pressing the first stage is to mill the seeds and then add a little water. After a few minutes of roasting, the seeds are heated to between 100 ° C and 110 ° C, the water evaporates and the seeds start to release the oil.

The water prevents the seeds from burning which allows us to produce the purest oil. The seeds are then put through a press.

For one litre of hot pressed oil we need on average three kilograms of seeds or about thirty-three pumpkins. It takes about an hour and fifteen minutes for the whole process. In an hour we produce up to seventeen litres of oil.

COLD - PRESSED PUMPKIN SEED OIL unique on the market

Cold-pressed seed oil is a naturally prepared and untreated oil utilizing the procedure where temperatures do not exceed 40°C , which allows the oil to maintain all its vitamins (A, A₁, B₆, C, D in E) and minerals (calcium, magnesium, phosphorous, potassium, iron, manganese, selenium and zinc).

The oil is easily digestible even calming in fact without irritating the stomach lining or causing acid indigestion, therefore it is especially recommended for those with stomach disorders.

Cold- pressed oil lowers the level of the lipoprotein cholesterol.

It is rich in vitamin E which the body requires for the normal functioning of the nervous system, also aiding fertility and the renewal of red blood cells.

Luxury Black Bottle is the fruit of Slovenian knowledge, to present an exclusive, unique, luxury product with a convincing design story, content and packaging. Each bottle is hand-blown from the purest glass, without the admixture of heavy metals (crystal - as a prestigious glass contains 30% lead).

This glass is the most pristine for foodstuff, in this case pumpkin seed oil, the storage of which is most suitable in dark glass packaging. The new, luxurious filling of the bottle is organic pumpkin seed oil made from sorted out and polished pumpkin seeds of the indigenous variety, which were grown on intact soil in the vicinity of the Kocbek oil mill. The purified seeds are ground in a mill with real stones, which the Kocbeks started using in 1929.

Pumpkin seed oil can be used cold added to various foods and salads. It can also be used to prepare hot dishes and gives it's own special emphasis and a distinctive flavour.
